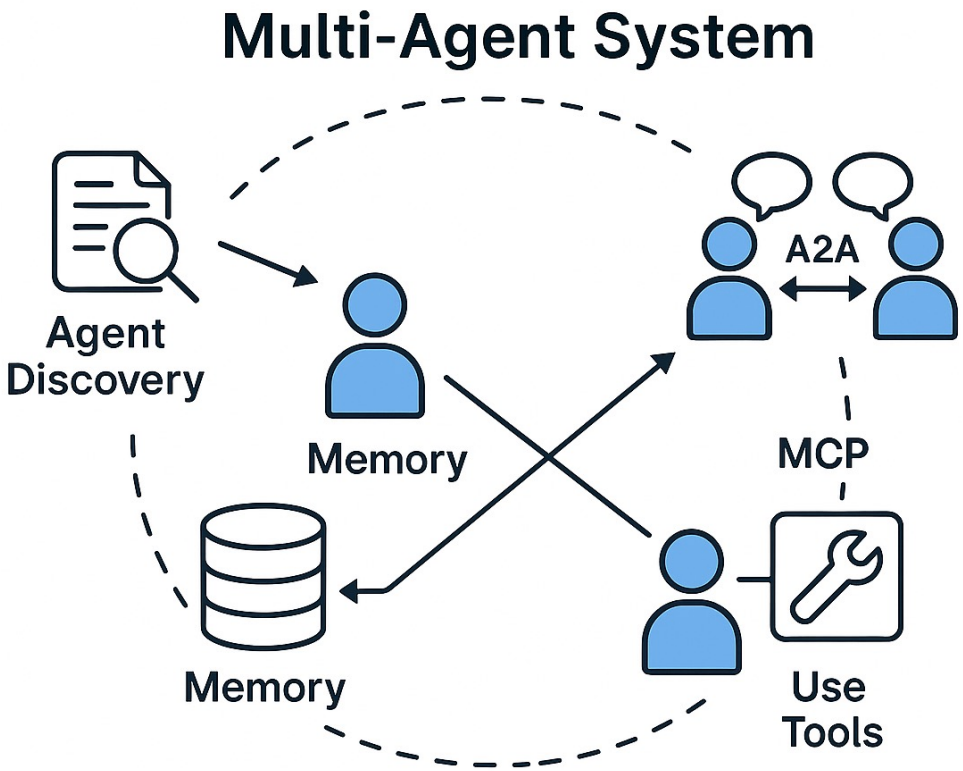
Internet of Agents

Linux Foundation projects AGNTCY and A2A

Luca Muscariello, Distinguished Engineer at Cisco
Technical steering committee member in Linux Foundation projects AGNTCY and A2A

Multi-Agent Systems (MAS)

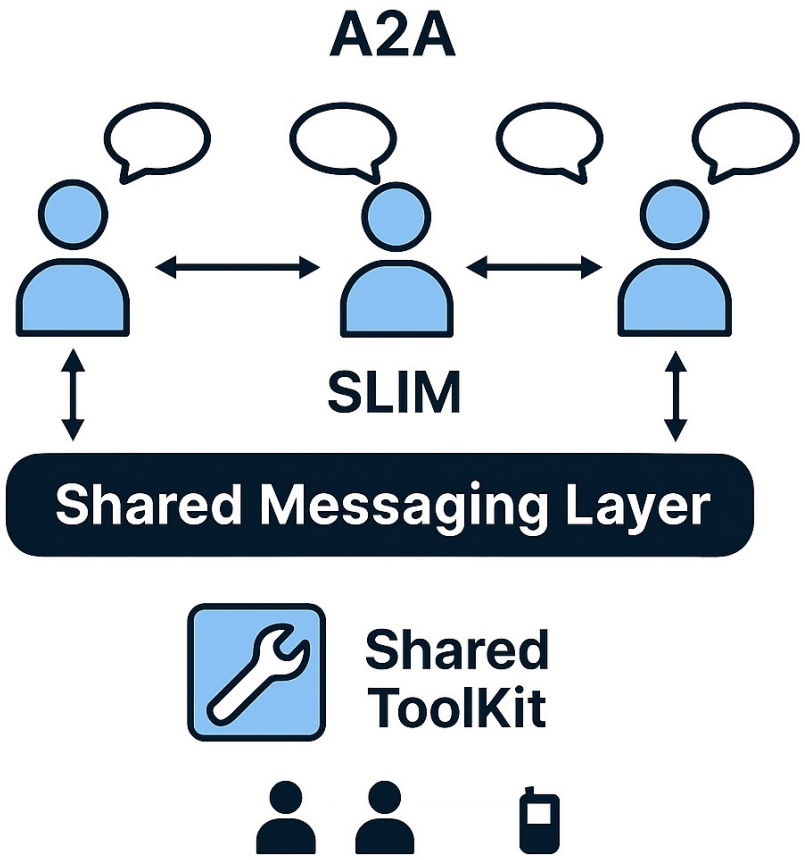
- Massive adoption of AI Agents already in progress
- Assistants in general: code assistants, specialized assistants
- LLM, tools, memory, messaging, discovery
- The Internet of Agents is a protocol stack that covers secure and scalable interoperability of all these components.



Cisco Confidential

Secure Realtime Interactive Messaging (SLIM)

- 80% of MAS
  - 1 LLM + prompts
  - Tools
  - Agent orchestration focusing on static tasks execution
- 20% of MAS
  - Several LLMs, shared Tools, specialized Agents collaborating
- The breakout will invert at some point in 2026
- SLIM enables secure and scalable communication among all these components



Cisco Confidential

Agent Discovery

- Agent Cards
- Discover AI components at build time
  - The Open Agentic Schema Framework (OASF) data modeling framework for AI components
  - The Agent Directory Service implements a decentralized directory of AI components
  - Integrated into code assistants via an MCP server which assists Agent Cards creation, announce and discovery
- Discover AI agents at runtime
  - Early stage
  - Currently limited to MCP and A2A Oauth endpoints
  - Rethink Zero Trust
  - ERC-8004 (Ethereum RFC) Trusless agents uses OASF for modeling discovery agent cards in smart contracts
  - More to be done in this domain
- Agent-Card/ai-card: Working repository for common AI Card standard

Observability and Evaluation

- We build MAS to solve problems more autonomously
- We solve problems using algorithms
- We build algorithms un computing systems
- We need to be able to answer the following questions, is this MAS going to halt ?
- We need MAS evaluation and observability data to achieve that too.
- This is a pillar of computational systems and it’s not a solved problem for MAS
- AGNTCY is working on that and produce already Open Telemetry features and the Metric Computation Engine (MCE)
