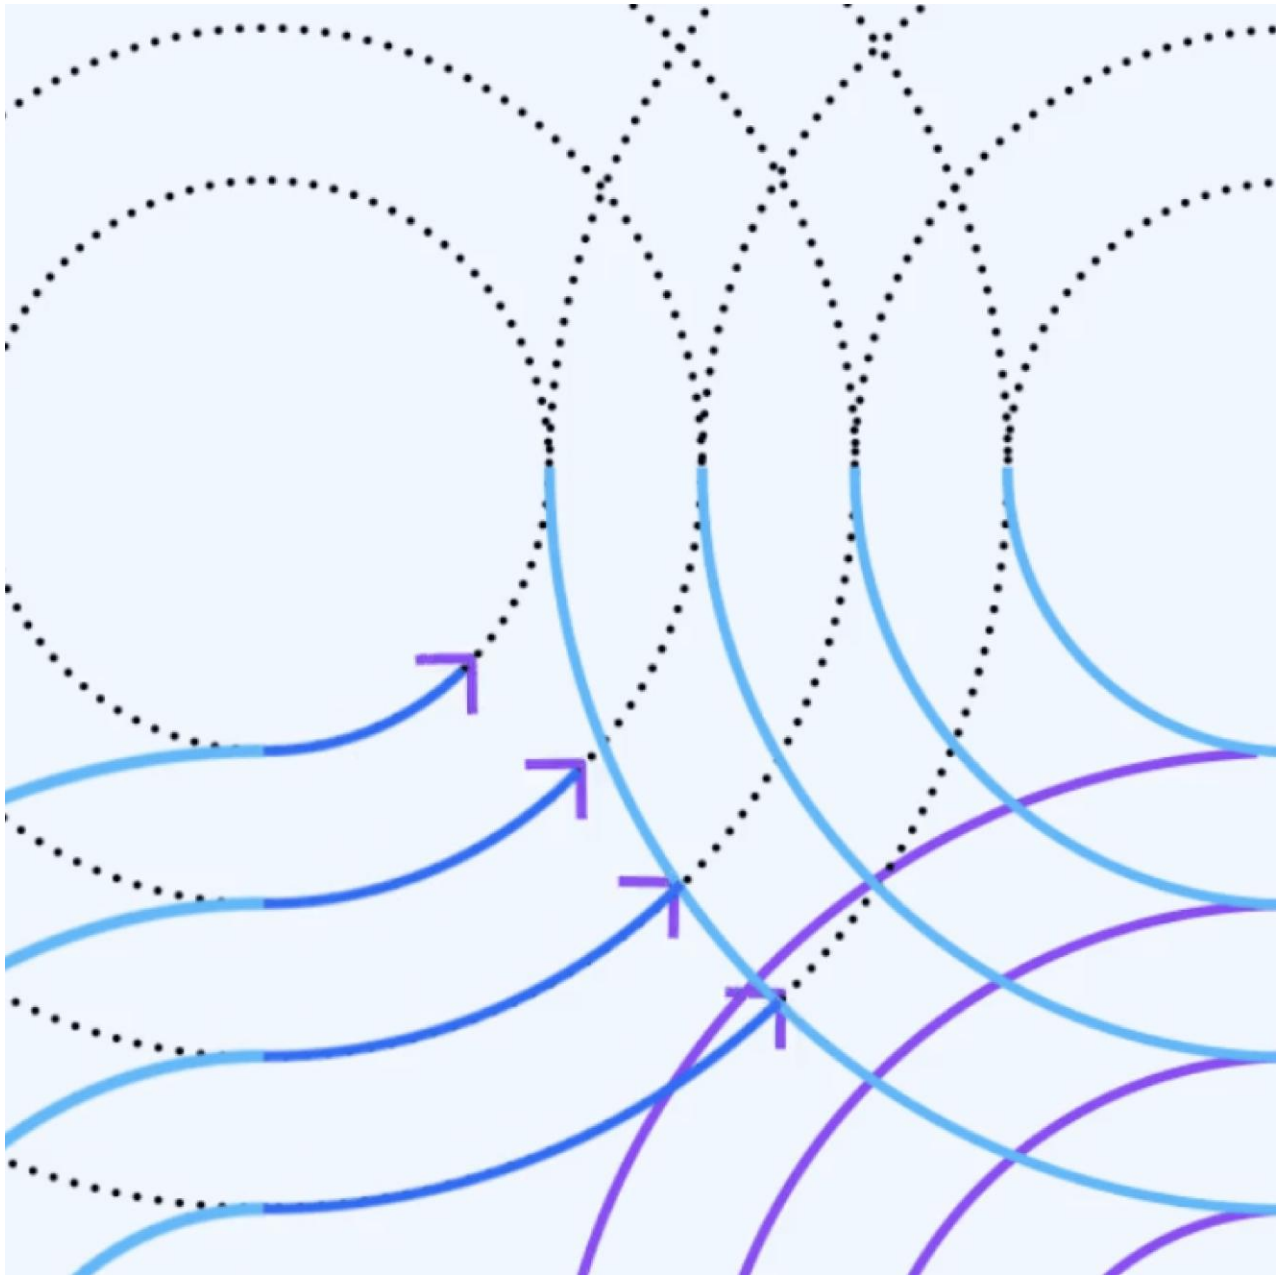
Level Up your AI

Building Powerful, Real-world agents with Langflow

Moustafa Eshra
Solution Architect

Mehdi Boulaymen
AI engineer

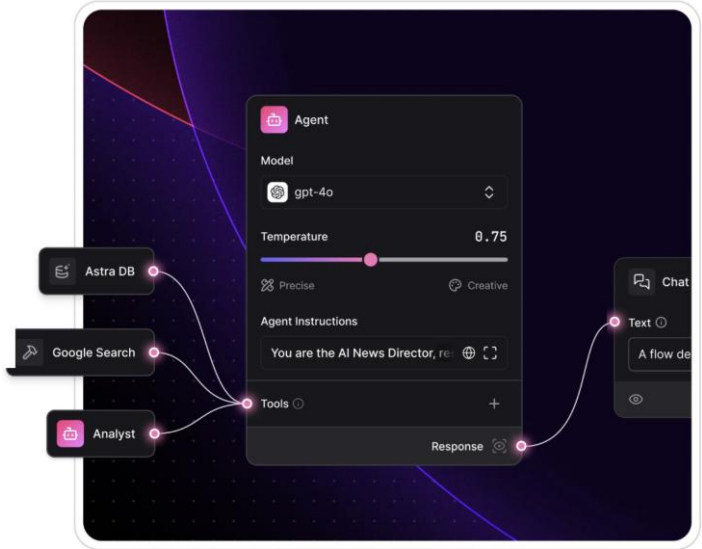


Generative AI

Empowering teams to build real-world Generative AI solutions — visually, rapidly, and reliably

✅ Why Langflow

- **Visual Workflow Builder**
  Intuitively design, test, and deploy LLM-powered applications — no complex coding required.
- **Modular & Flexible**
  Plug-and-play components for LLMs, retrievers, tools, and agents — fully customizable.
- **Built on LangChain and more**
  Leverage the power of the LangChain ecosystem with an easy-to-use visual layer.
- **Rapid Prototyping to Production**
  Go from idea to deployment in minutes — ideal for RAG, chatbots, summarization, and more.



Langflow

🧠 Accelerate Your GenAI Strategy

- **Support for Multiple Models**: Integrate **OpenAI, Anthropic, Cohere, Mistral**, and **open-source LLMs**.
- **Enterprise-Ready**: Deploy in secure environments with **self-hosted** and **cloud-native** options.
- **Observability & Debugging**: Visual trace of every step makes testing and iteration **faster and more reliable**.

🧪 Langflow Use Cases

- **RAG Pipelines** (Retrieval-Augmented Generation): Seamlessly connect vector stores, search tools, and LLMs.
- **AI Agents & Tools:** Orchestrate multi-step reasoning with external tool calling and memory.
- **Enterprise Chatbots:** Build domain-specific assistants that are easy to maintain and scale.

Langflow

Multi-Agent Capabilities

- Any component can be a tool, including custom components
- See agent responses in the playground

User Experience

- Templates & use cases library
- Ecosystem Partner Bundles
- Additional component types

Rapidly Deploy and Measure with Langflow

- **Rapidly iterate** to production level accuracy
- **Measure as you go** with LLM evaluation
- **Visual low code**
- **Easily extensible** with custom code
- **Seamless integration** with Astra Vector Search, GraphRAG and knowledge layer services

Langflow

The Best Platform for Multi-Agent

- Reasoning and memory built into components
- Everything can be a tool for Agents, (including other Agents)
- Easily understand Agent actions and intermediate steps
- Seamless integration to Astra DB to ground Agents in your data

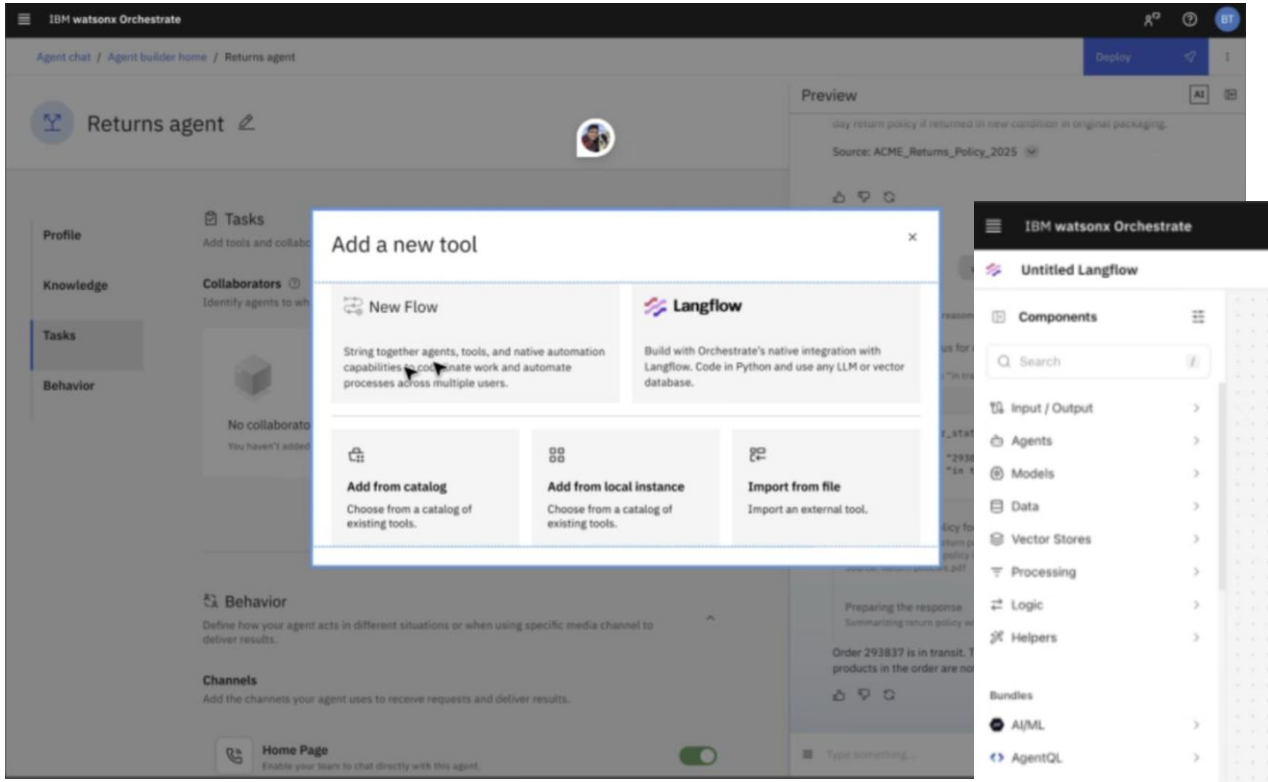
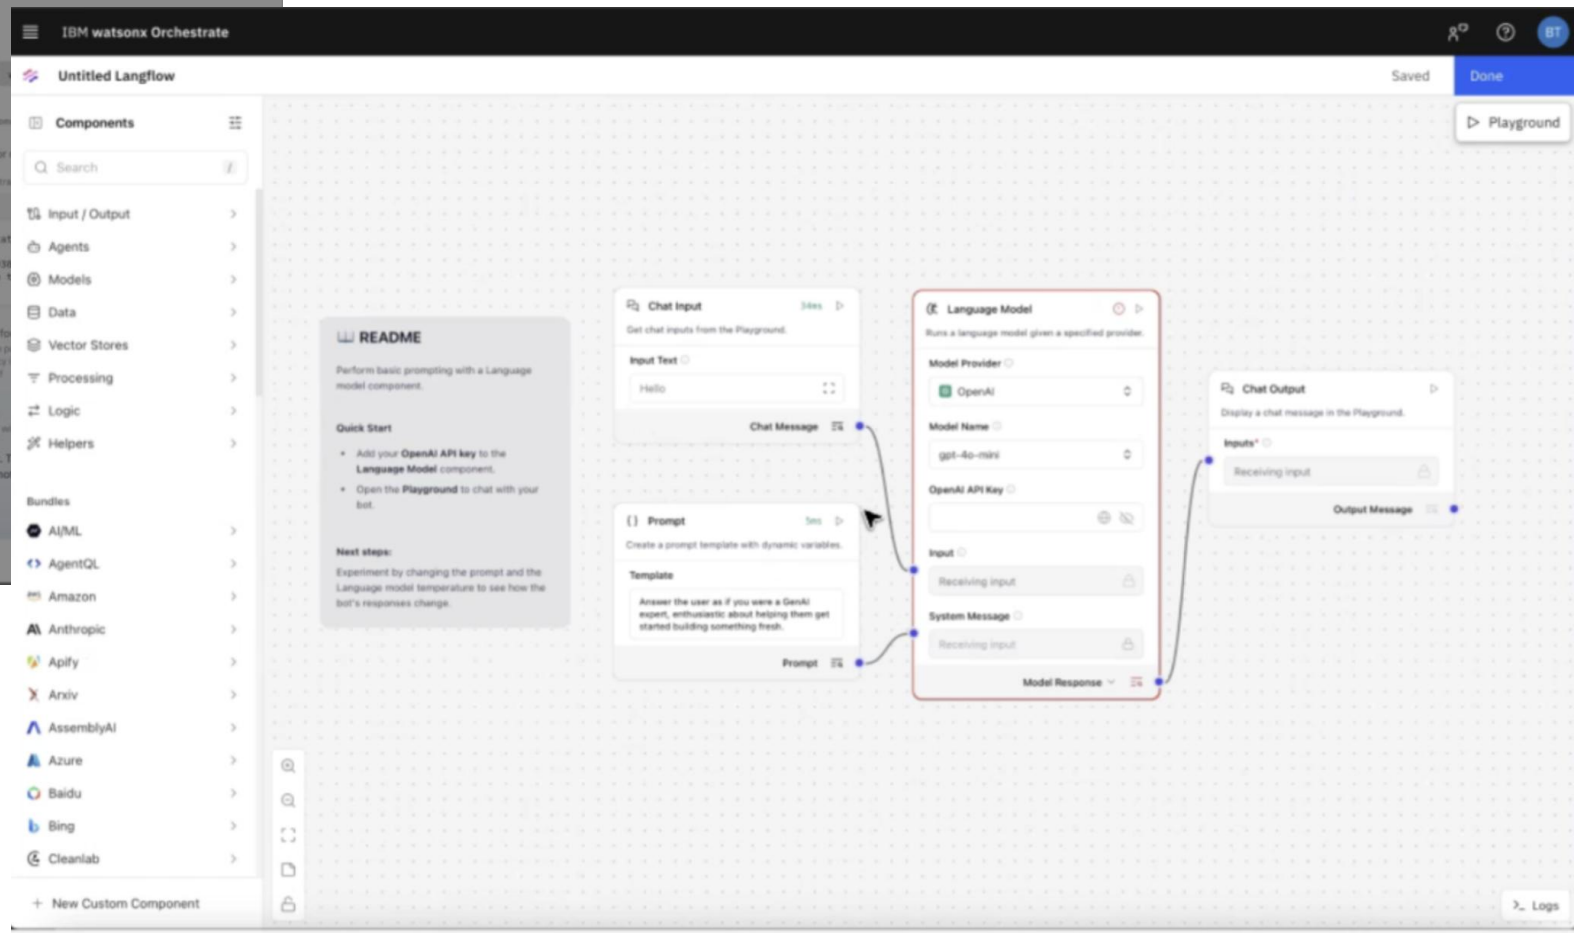
Langflow + watsonx Orchestrate





❯ Production AI Apps with Accuracy at Any Scale

Velocity to Production

- Langflow for rapid AI prototyping and multi-agent orchestration
- Large and growing ecosystem of partners for AI development
- Create custom components with code to integrate with any AI system

Accurate AI at Any Scale

- Open source vector search from thousands to billions of vectors
- GraphRAG, multi-vector, and hybrid search capabilities
- Fine-tune and optimize AI models to your data

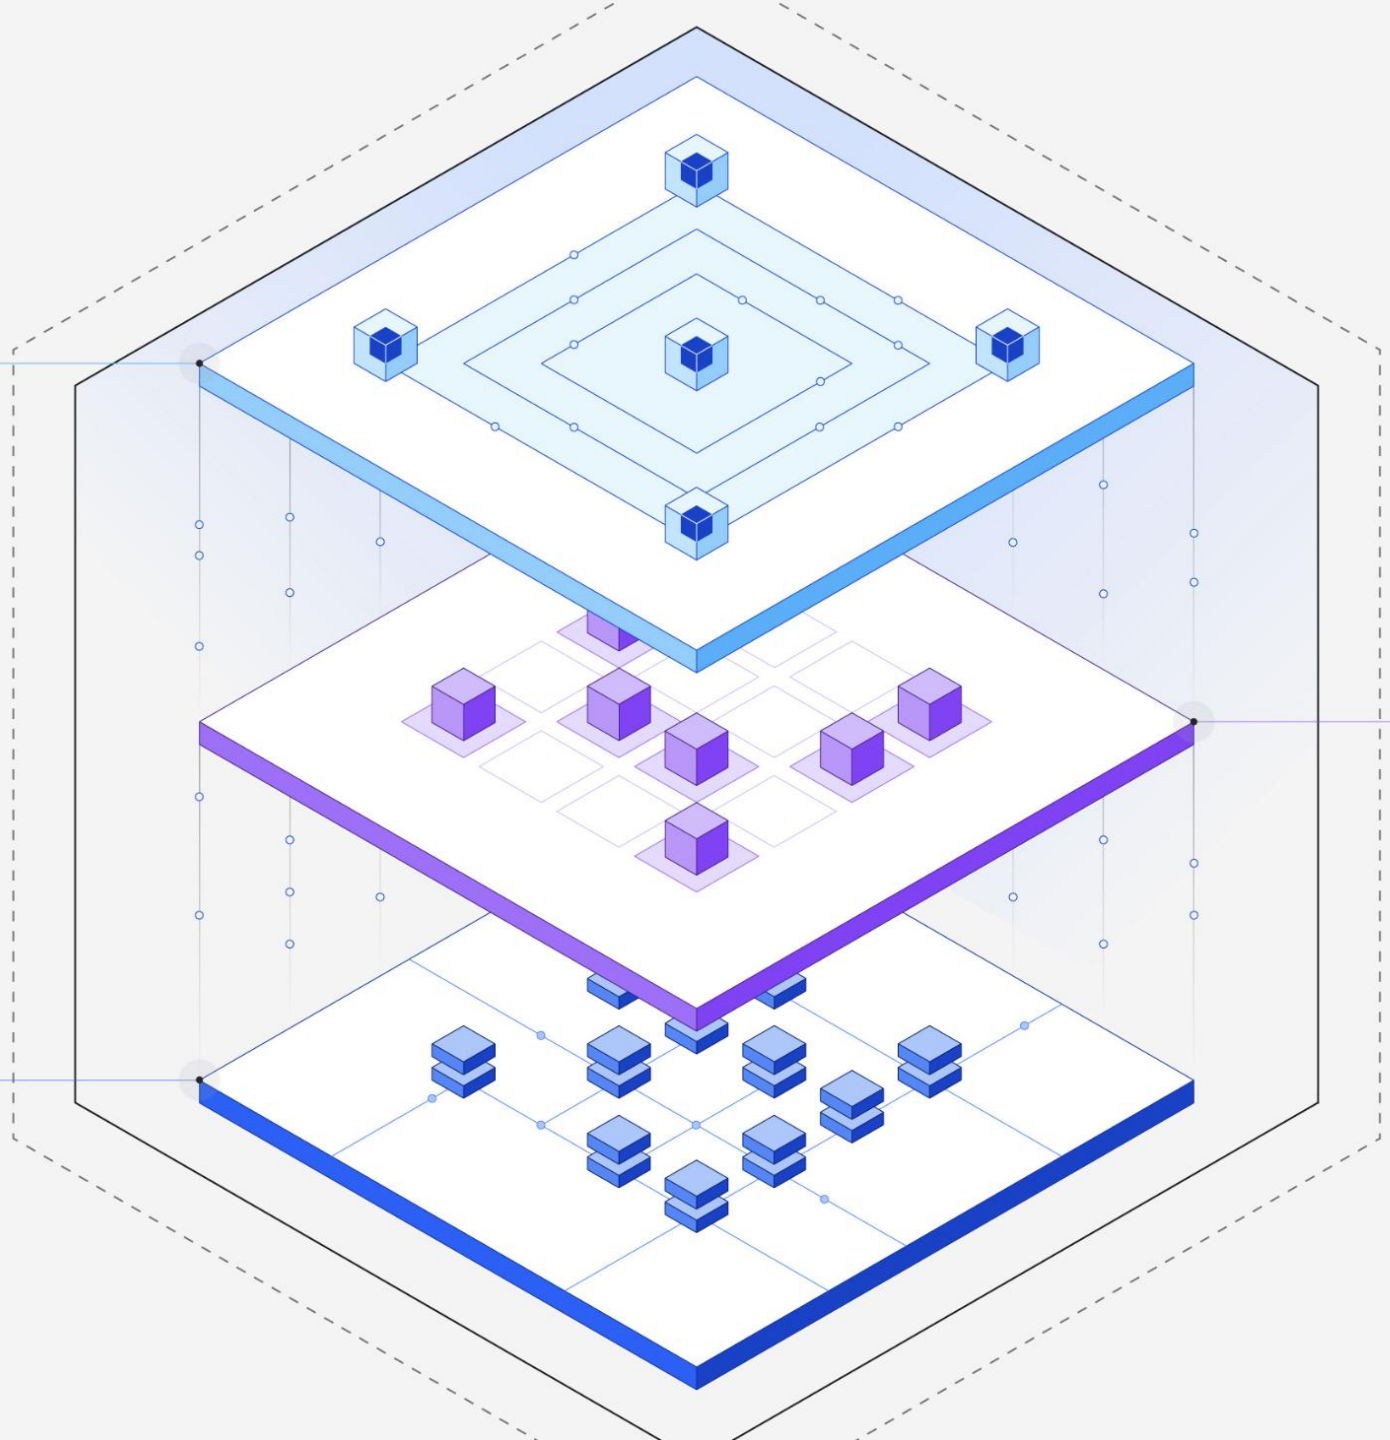
watsonx

What IBM offers

The platform for AI and data

watsonx.governance

Enable responsible, transparent and explainable AI workflows



watsonx.data

Scale AI workloads, for all your data, anywhere

watsonx

Scale and accelerate the impact of AI with trusted data.

watsonx.ai

Train, validate, tune and deploy AI models

IBM’s generative AI technology and expertise

AI assistants	Empower individuals to achieve higher levels of performance by using generative AI to simplify access to information and automation across the business.	watsonx Code Assistant watsonx Assistant watsonx Orchestrate	
SDKs & APIs	Embed watsonx platform in third - party assistants and applications using programmatic interfaces.	Ecosystem integrations	
AI & data platform	Leverage generative AI and machine learning — tuned with your data — with responsibility, transparency and explainability.	watsonx watsonx.ai watsonx.governance watsonx.data	Foundation models Granite | *IBM* Open Source | *Hugging Face* Llama 2 | *Meta AI* Geospatial | *IBM + NASA* ...
Data services	Define, organize, manage, and deliver trusted data to train and tune AI models with data fabric services.	Data fabric services watsonx Discovery	
Hybrid cloud AI tools	Build on a consistent, scalable foundation based on open-source technology.	Red Hat OpenShift AI (*e.g.*, Ray, Pytorch)

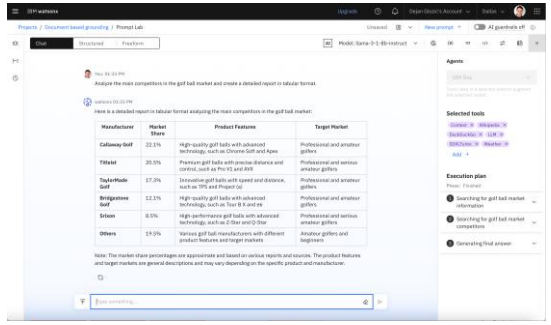
watsonx.ai is more than a studio…
The functions of a complete AI-based offer

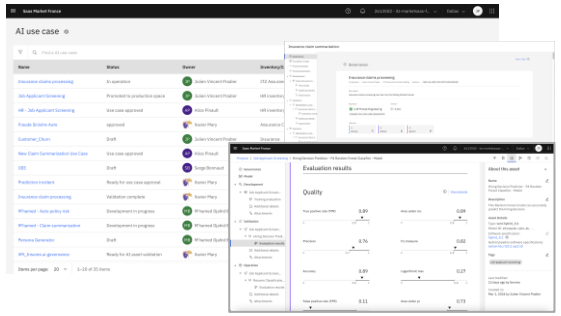
1. AI Studio

Development studio at the forefront of GenAI innovation (RAG, Tool Calling, multi model, multi modal) in no code. Ability to work collaboratively, save as an asset or code for easy deployment.



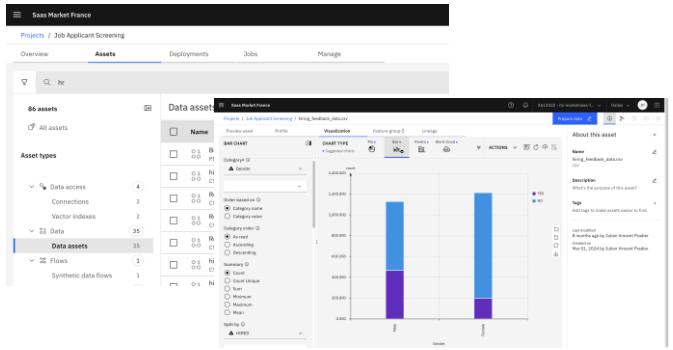
2. AI Evaluations

The basics of governance (linking activities to business use cases, automatic documentation and model evaluation) to be completed by watsonx.governance for risk management based on these bases.



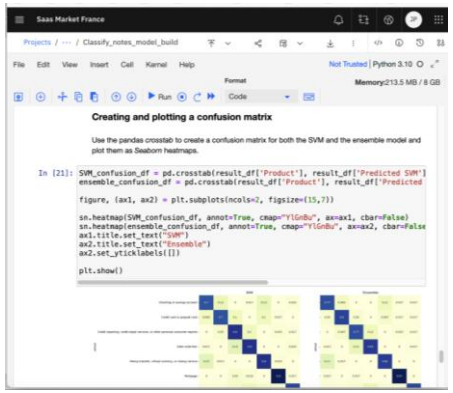
3. AI Data Access

Access to data (70+ pre-packaged connectors) and synthetic data preparation and generation tools to be completed with watsonx.data for AI storage directly on the platform.



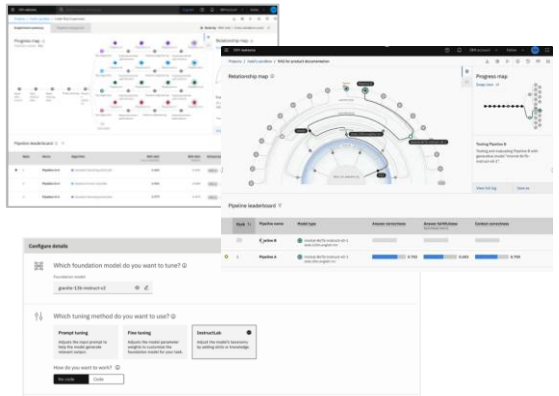
4. AI Expert Full Code

Coverage of traditional AI in low code – full code (predictive, prescriptive) to cover use cases that mix the two approaches.
Opening up to full custom approaches (pytorch, transformers), VS code extension.



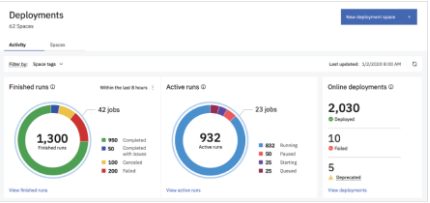
5. AI Avanced No Code

Unique ones to speed up the work of teams: AutoAI (automation of classification problems, regression, time series), AutoRAG (automation of the creation of RAG chains).
No Code tuning methods (Prompt, FineTuning, InstructLab).



6. AI Engine

AIOps / MLOps management: the platform is not only a development platform but also the platform for deploying models and use cases (RAG chains, prompt templates, classifiers and scoring engines) and allows the compartmentalization of activities and the sharing of infrastructure.



Agents

Three areas of agentic innovation

Pre-built agents

watsonx Orchestrate
Accelerate AI agent deployment.

Get started quickly with prebuilt AI agents powered with business logic and seamless integration to the tools that power your business.

Custom-built agents

watsonx.ai
Build custom-designed agents.

Design, deploy and manage AI agents with ease using pro- and low-code options.

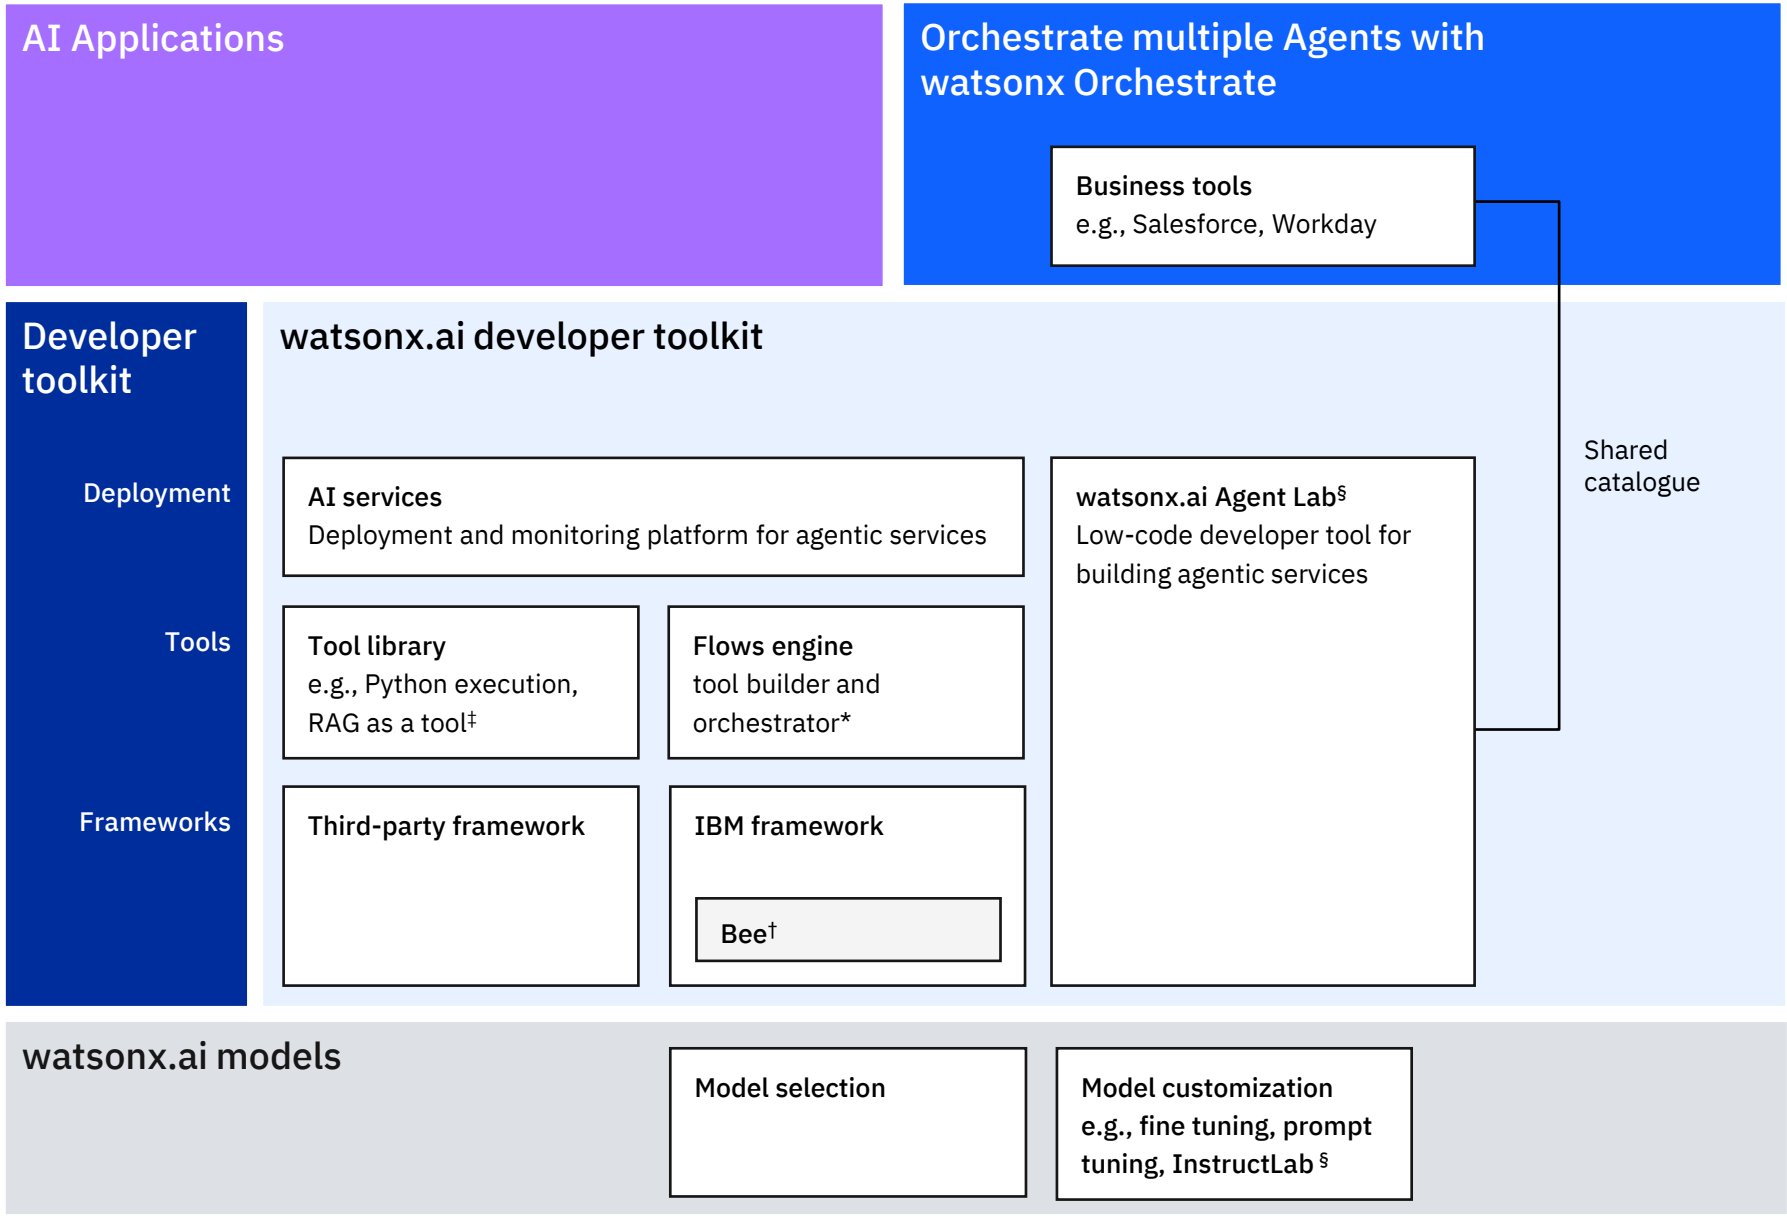
Multi-agent orchestration

watsonx Orchestrate
Manage all agents in one place.

Easily deploy and manage any agent for any task within a simple and unified user experience optimized to scale.

Architecture
Custom-built agents

One size does not fit all for building agents



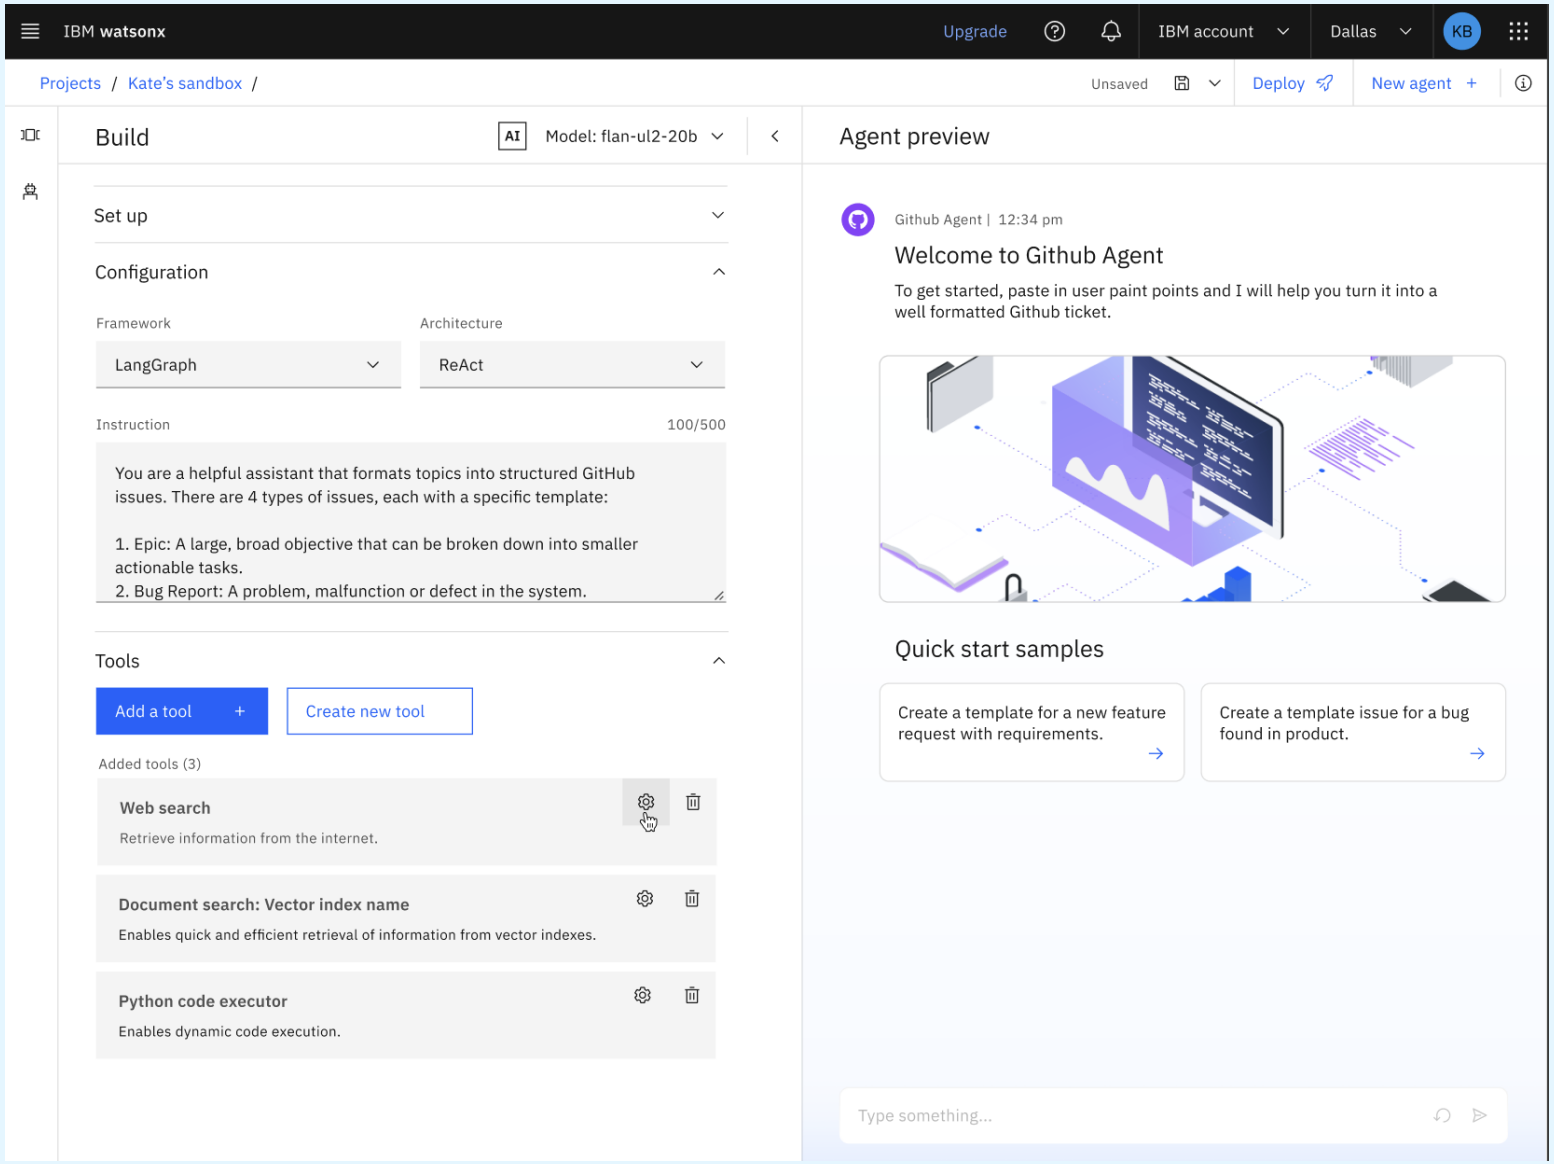
* Stand-alone in tech preview; to be integrated into watsonx.ai
† Experimental, open-source project
‡ In discovery
§ Coming soon

Agent Lab currently in Tech Preview

watsonx.ai Agents

What's available today?

- Support for Chat API, Tool Calling, JSON returns together with providing the foundation for agentic support
- AI Services that provide the foundation for deployment of python based agentic solutions
- End-to-end template for the development and deployment of a custom Langraph agents
- Introduction of Agent Lab (Beta), enabling a low-code experience to build agentic solution with 1-click deployment as a production-ready API endpoint



watsonx.ai SDKs

Build agentic services using popular open-source agentic frameworks through industry-standard API and SDK support.

watsonx Orchestrate

Watsonx Orchestrate is IBM's unified solution to build & scale Agentic AI for high value workflows

IBM brings to life pre-built tools, agents, and templates across enterprise use cases to empower businesses to optimize end to end workflows that drive high productivity through a combination of generative AI, domain skills, new and existing automations from and across third party platforms.

Customer Care

Use cases

- Digital self-serve
- Modernize contact center
- Case management
- Agent Assist
- Contact Center Insights

Business impact

- Better resolution times
- Reduced costs
- Improved NPS/CSAT
- Higher agent retention

Sales

Use cases

- Buyer experience
- Lead management
- Opportunity management
- Seller support

Business impact

- Higher conversion rate
- Increased order size
- Improved upselling
- Customer retention

Supply Chain

Use cases

- Sourcing Support
- Supplier Management
- Sustainability
- Inventory Management

Business impact

- Cost per order
- Lead times
- Order cycle time

Procurement

Use cases

- Procure to pay
- Contractor requisitions
- PO management
- Supplier assessment

Business impact

- Improved onboarding
- Reduced external spend
- Improved sourcing

Finance

Use cases

- Source to Pay
- Order to Cash
- Expense Management
- Auditing
- Financial Reporting

Business impact

- Cost per transaction
- Days sales outstanding
- Time to close period

HR

Use cases

- Talent Recruitment
- Onboarding
- Payroll
- Compensation
- Employee support

Business impact

- Time to offer
- Cost per hire
- Reduced support cost
- 1-click resolution rates

Build and manage

AI Agents and AI Assistants
Integrate custom built or external agents and assistants to automate complex tasks.

Tools
Pre-built, accessed through MCP, and custom APIs and automations that can be used by agents

Channels
Native integrations, including common CCaaS providers

Voice Models
Native speech recognition or integrate with 3rd party

Agentic workflows
Design end to end flows mapped to processes and configuring level of agency

Low code Agent builder
Create AI agents in minutes—no coding required

Agent Development Kit (ADK)
Create custom agents and tools through a simplified dev experience w/ Langflow

Multi-model
Access or bring task specific LLMs: IBM, 3rd party, OSS, your own

Agent Ops and Analytics – evaluation, monitoring, and continuous optimization and governance

IBM Client 0 – IBM's technology as the enabler for IBM's transformation and growth

AskIBM with **watsonx**
A central unified interface for all IBMers, connecting to each domain

IBM AskHR with **watsonx**

10M
Annual HR interactions fully resolved by AI

40%
Reduction of HR operating budget

+55
Improvement of HR NPS score

IBM AskIT with **watsonx**

100
Days to build + deploy AskIT from scratch

80%
Inquiries resolved via AskIT

50%
Reduction in support tickets after 12-month deployment

IBM AskSales with **watsonx**

180K
Hours per week saved in gathering account information and insights

5K
Seller questions answers per week (product guidance and persona targeting)

40%
Improvement in qualify of outreach content

IBM AskIncentives with **watsonx**

96%
Sales related inquiries contained within AI Assistant

90%
Greater accuracy in expense accruals

76%
Increase in productivity while serving 22k sellers

IBM Procurement with **watsonx**

...

85%
Orders now processed via 'touchless procurement'

50%
Reduction in time spent on manual, repetitive tasks

15%
Enterprise workforce comprised of contractors

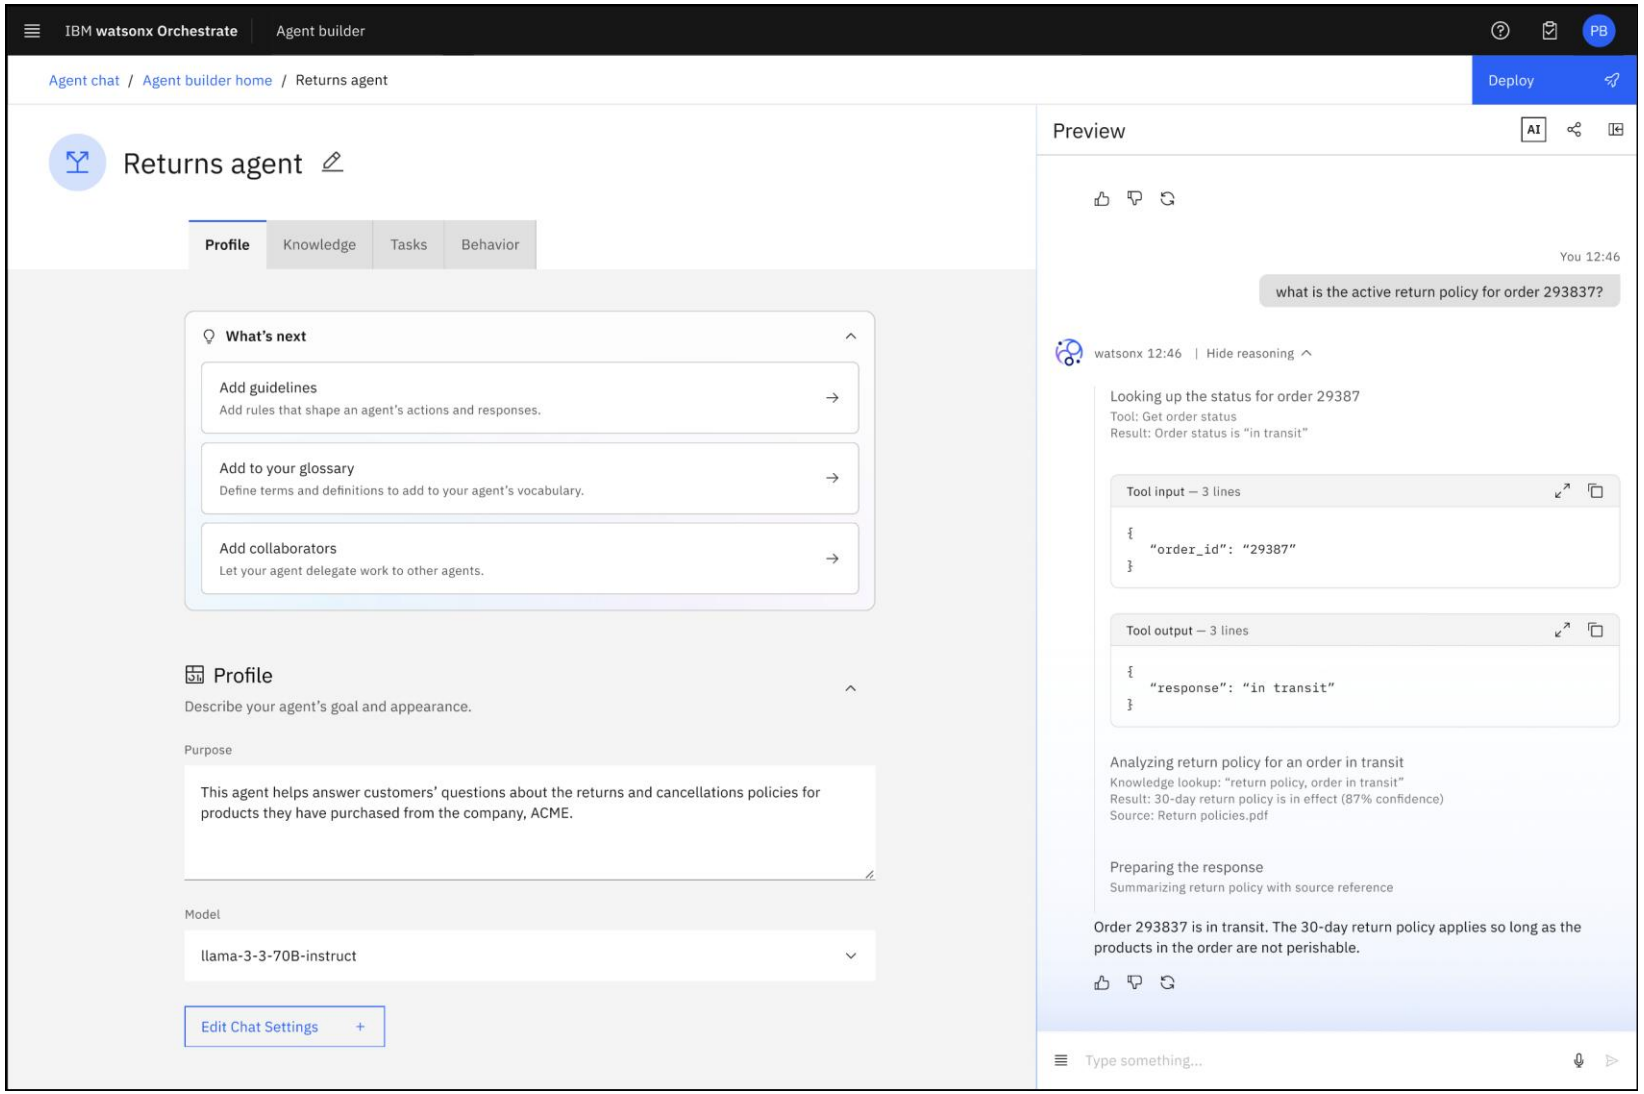
Demo

Agent Builder Studio

A no-code agent and tools builder studio that unifies all builder experiences in Orchestrate into a single, simplified experience.



Coming soon

Demo

Build AI agents with a low code SDK approach

Enterprise teams and developers can build expert agents with the agent SDK.

Full support for SDLC via GitOps and CI/CD integration

Agents

Agents are used to orchestrate tools and other agents to perform complex tasks defined by the user. In Orchestrate, agents are available to users through a conversational interface, both through a UI client and through an API for direct integration. As Orchestrate is focused on empowering business teams, our agent framework is designed to be easy to use and understand for non-technical users and developers alike and supports both declarative and programmatic agent creation. The same components that are provided in the SDK are also used by the no-code Agent Builder UI (planned for public preview in Q2 2025).

Here is an example of an Agent:

```
# research_agent.py
from ibm_watsonx_orchestrate.agent_builder.agents import Agent
from ibm_watsonx_orchestrate.agent_builder.tools import tool
from .tools import web_search

research_agent = Agent(
    name="research_agent",
    # The description will be used by Orchestrate to help it decide whic
    description="A Research Assistant which can query the web to help the
    instructions="Use the tools provided to answer the user's question.
    tools=[web_search],
)
```

They can also be defined in the equivalent YAML or JSON format:

```
# research_agent.yaml
spec_version: v1
kind: native
style: default
name: research_agent
description: A Research Assistant which can query the web to help the use
llm: watsonx/ibm/granite-3-2-8b-instruct
tools:
- web_search
```

The Orchestrate CLI can import an Expert Agents with the following command:

```
orchestrate agents import --file research_agent.yaml
```
